

Total Productivity Solutions from Panasonic!

Panasonic now offers Kofax's VRS Elite software bundled with select scanners.

What is VRS?

Virtual ReScan Professional is an image enhancement tool. It integrates with the user's scanning application and includes many advanced features. VRS works hand-in-hand with the user's scanning application and Panasonic scanner. When the user initiates a scan request from the scanning application, VRS evaluates and processes the request based on the image type (color, bitonal, or grayscale). Once the image is scanned, VRS applies adjustments as appropriate and then sends the processed image back to the scanning application.

The new Panasonic VRS bundle enables you to offer your customers a complete solution including hardware and software, increasing their productivity and workflow.
